

Information Management for Progressive Fund Accounting!

Finally, a Fund Accounting system designed to take advantage of the latest advances in the personal computer. AMASE brings the full power of 32 bit multi-tasking to the desktop in an advanced Fund Accounting System that's powerful, yet simple to use. Imagine a world where your accounting system becomes one with all the other desktop applications you have come to depend on such as Microsoft Excel and Word. Imagine sending reports or purchase orders via the World Wide Web. Imagine being able to create an unlimited number of highly sophisticated reports in an easy and intuitive manner. Or imagine the ability to extract any kind of information necessary from your database and even create sophisticated charts and graphs illustrating meaningful trends. All of this is standard in AMASE and here today!

What is AMASE ?

AMASE is a collection of fully integrated 32 bit software modules designed to work together collaboratively forming a fully functional Management Information and Processing System for all levels of Government and not for profit entities. AMASE is designed to be comfortable for all levels of users from the most novice of users to the most experienced power user.

What modules make up AMASE ?

The basic system is comprised of the following modules:

- **Administration**
- **General Ledger with Budgeting**
- **Accounts Payable**
- **Purchase Orders including Requisitions**
- **Accounts Receivable**
- **Miscellaneous Billing**
- **Property Tax Billing**
- **Visi-Link for Vision Assessing Software**
- **Fixed Assets**
- **Utility Billing**
- **Payroll**
- **Human Resources**
- **ClerkWorks with E-Reg**
- **ClerkWorks XML with E-Reg to interface with the new State MAAP system**
- **Dog, Bicycle, Wetland, etc. Licensing with Point of Sale**
- **Crystal Reports©**

What operating systems does AMASE run under?

AMASE is designed to run under Windows NT/9X/2000/XP while taking full advantage of the multi-processing capabilities of these operating systems. AMASE is pure 32 bit code and will not run under Windows 3.X.

What database platform does AMASE Use?

AMASE utilizes the Advantage Database Server providing exceptional performance, reliability and data integrity. Advantage Database Server is a high performance client/server DBMS for standalone, networked and Internet database applications. Advantage is a completely scalable Client-Server database that outperforms either SQL Server and Access without the associated overhead. The database has been in production for many years and has proven itself as fast, scalable and extremely reliable. Advantage provides native and ODBC access, requires no maintenance, is ANSI SQL compatible and completely scalable. I would invite anyone to visit Extended Systems Web site for more information.

Does AMASE support SQL?

Not only does AMASE support SQL but comes standard with Data Manager, allowing users to create and maintain an unlimited number of user defined queries that may be executed at any time providing unlimited access to the entire AMASE database.

Can I modify the reports or create my own reports?

Yes, all standard AMASE reports are built on Crystal Reports[®] which comes with AMASE. All reports that come standard with the system may be modified to suit any particular requirements. Crystal Reports is rated #1 in the industry for its power and ease of use. AMASE allows users to maintain independent versions of the same report.

Will AMASE continue to keep up with the rapid changes in information technology?

Yes, because the system is based upon 32 bit architecture from the start, the system is positioned to take advantage of the latest in technological advances without modifications to the foundation.

How much does AMASE cost?

In order to make the system available to the widest market possible, AMASE is priced based upon the demographics of the entity it is designed to serve. Those with smaller budgets and fewer users will pay less while those with larger budgets and a greater number of users will pay more.

How can I get more information or see a demonstration?

Simply contact us (see below) and we will make available any information you require and/or set up a demonstration so that you may see the system in action. Please visit our Web Site at www.interwaredev.com
